**Immunoexpression of progesterone receptor, epithelial growth factor receptor and galectin-3 in uterine smooth muscle tumors**

Mervat M Soltan<sup>1,2</sup>, Abdelkader M Albasry<sup>1</sup>, Maha K Eldosouky<sup>1,3</sup> Hanan S Abdelhamid<sup>4</sup>

Uterine smooth muscle tumors constitute a spectrum of neoplasms. Usually diagnosis of leiomyomas (LMs) is straight forwards; however, atypical leiomyomas (ALMs), and smooth muscle tumors of uncertain malignant potential (STUMPs) have overlapping features and need to be distinguished from leiomyosarcoma.

Aim of this study is to evaluate progesterone receptor (PR), epithelial growth factor receptor (EGF-R) and galectin-3

Notes:
