20% of people in the UAE are suffering from gastrointestinal problems because of obesity, poor diets and close marriage. Acid reflux, ulcerative colitis and irritable bowel syndrome are increasing in recent years. There are also a high number of sufferers of fatty liver, caused to a large extent by the excessive consumption of sugary drinks. Obesity is an issue that can affect the UAE's development as a nation and needs to be managed immediately and effectively, vague discomfort is usually the only symptom of a fatty liver. Low fiber diets, lack of exercise and consuming large amounts of food and dairy products are responsible for the majority. Genetics combined with obesity are responsible for people suffering from many disorders. A case of fatty liver, if ignored, might escalate to an advanced liver problem later in life. During our practice in UAE we came across many rare and unusual disease presentations that were missed because of either lack of awareness or failure to check detailed history including family history 1889 410.392 0 10 1F6 (o)(ur)129 458.3922 Tm [(h)0.6 (si)-5 (l)-3 (a)erlition an4 (e
