June 12-13, 2017 Rome, Italy

Pollyanna Fernandes Patriota, Andrea Filgueiras, Maria Paula de Albuquerque and Ana Lydia Sawaya
Federal University of São Paulo, Brazil

Deficiency of micronutrients, including vitamin D, is frequent in several countries, regardless of the nutritional state; however, its magnitude is higher in overweight children. There are many evidences that overweight children and teenagers represent a vulnerable group to vitamin D deficiency. Besides that, the deficiency of vitamin D appears to be the biggest contributory
