Background & Aim: The incidence of obesity children is increasing worldwide. Which bariatric procedure is the best for the affected children is still debatable. We observed the results of sleeve gastrectomy and conversion rate for children.

Method: Between 2006 and 2014, we have performed 36 sleeve gastrectomies for children at the age between 8 and 12 years (94%) were available for follow up between 3-10 years. We collected our data prospectively. Recorded data preoperatively included
