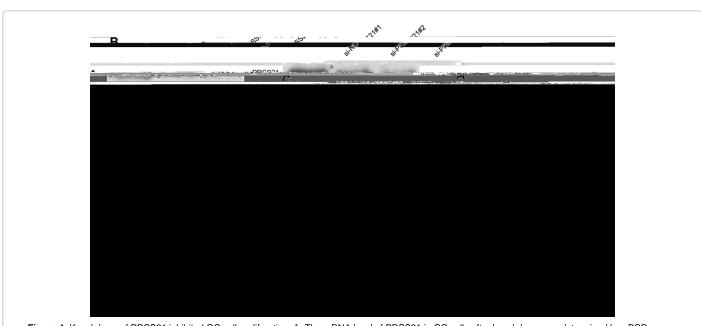

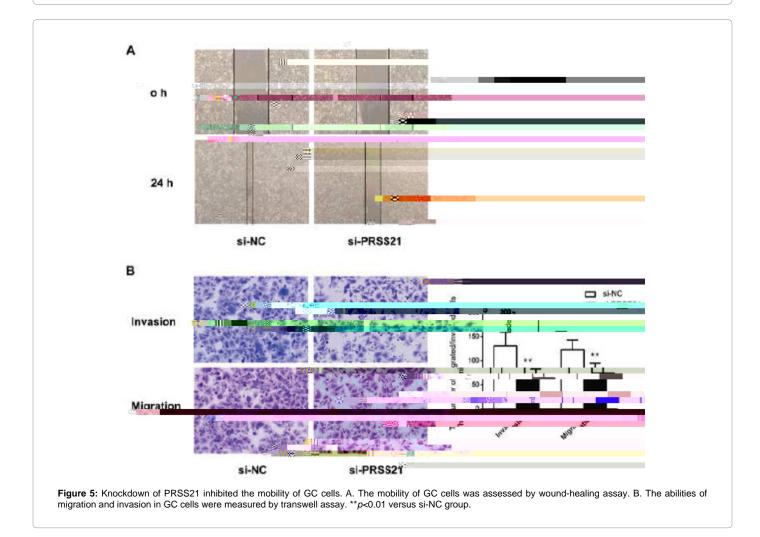

Figure 4: Knockdown of PRSS21 inhibited GC cell proliferation. A. The mRNA level of PRSS21 in GC cells after knockdown was determined by qPCR assay. B. The protein level of PRSS21 in GC cells after knockdown was determined by western blot assay. C. GC cells growth was assessed by measuring the OD values using the CCK-8 assay. ***p*<0.01 versus si-NC group.

Declaration of Interest

The authors declare that they have no competing interests.

Authors' contributions

YDW designed the study and wrote the manuscript. CHH performed experiments and analyzed the data. All authors have read and agreed the fnal manuscript.

Availability of data and materials

All data generated or analyzed during this study are included in this published article.

Consent to publish

All authors agree to the publication.
