

Cancer scenario in India

Neeraj Jain

India is a creating nation. The current populace is 1.35 billion. 1.4 million new malignancy patients are analyzed each year. A sum of 2.25 million cases are common at a given time. Mortality from disease is as high as 1.2 million. Cervix and bosom are driving diseases among females and head, neck and lung are driving malignant growths among guys. Because of neediness and representation there is absence of mindfulness which prompts introduction at cutting edge or metastatic stage. The treatment in a large portion A
