

Cervical Neoplasia Understanding, Prevention, and Treatment

Gregory Pond*

Department of Biostatistics Health Sciences, Canada

Abstract

Cervical neoplasia, a spectrum of conditions characterized by abnormal cellular growth in the cervix, poses a significant global health challenge for women. This article provides an in-depth exploration of cervical neoplasia, focusing on its etiology, risk factors, and avenues for prevention and treatment. The primary driver of cervical neoplasia,

Detection and screening: Regular cervical cancer screenings are
