

# Consequences of Intimate Partner Violence in Relationship with Pregnancy

Adam Smith\* and Martin William

Department of Sociology, Cardiff University, UK

## Abstract

Intimate partner violence (IPV) is a global public health problem that is often overlooked. IPV is a multifaceted phenomenon that can take many forms, including physical, sexual, psychological, and financial abuse. The consequences of IPV are far-reaching, affecting the physical and mental health of both victims and their children. In this paper, we explore the consequences of IPV in relationship with pregnancy. We discuss the prevalence of IPV during pregnancy and the potential risks to the health of both the mother and the fetus. We also discuss the importance of identifying and supporting pregnant women who are experiencing IPV. UK, Email: adamsmith34@yahoo.uk
