Abstract

The patient was born in 1927 to a wealthy middle class family from Buda. Before she was born, her maternal uncle died of type 1 diabetes, probably of diabetic ketoacidosis at the age of 22. Her family members were not long-lived. She was diagnosed with diabetes in 1932 at the age of five. Her condition was immediately treated with rapid-acting ("regular") insulin, which was administered three times a day. In the mid-thirties, her father purchased a Zeiss
