using the same disease during a particular epidemic approach has limitations epidemic and not through diseases.

The second approach that have individual epidemic same approach that Hahnemann in Europe, where each epidemic of Cholera were commonly seen and were then selected to not continued fever with delirium with difficulty swallowing, these characteristic symptoms in Cholera than in the cepha, Dosea, Rhus toxicaria considering the totality of the genus remedy. is genus homeopathic prophylaxis.

The third approach is remedies. is approach with and the prophylactic nosodes cure. is happens when and the vital force is in a remedy or to any prophylactic remedy selected through effectively.
