Discussion

The prevalence of mental health issues in the elderly population is approximately 90% in the United States (IF). The elderly population is the fastest growing segment of the U.S. population, and the number of people aged 65 and older is expected to increase from 40 million in 2010 to 80 million by 2050. Mental health issues in the elderly are often underdiagnosed and undertreated. The prevalence of mental health issues in the elderly is approximately 50% in the United States (IF). The elderly population is the fastest growing segment of the U.S. population, and the number of people aged 65 and older is expected to increase from 40 million in 2010 to 80 million by 2050. Mental health issues in the elderly are often underdiagnosed and undertreated. The prevalence of mental health issues in the elderly is approximately 50% in the United States (MDD). The elderly population is the fastest growing segment of the U.S. population, and the number of people aged 65 and older is expected to increase from 40 million in 2010 to 80 million by 2050. Mental health issues in the elderly are often underdiagnosed and undertreated. The prevalence of mental health issues in the elderly is approximately 50% in the United States (D). The elderly population is the fastest growing segment of the U.S. population, and the number of people aged 65 and older is expected to increase from 40 million in 2010 to 80 million by 2050. Mental health issues in the elderly are often underdiagnosed and undertreated. The prevalence of mental health issues in the elderly is approximately 50% in the United States (I). The elderly population is the fastest growing segment of the U.S. population, and the number of people aged 65 and older is expected to increase from 40 million in 2010 to 80 million by 2050. Mental health issues in the elderly are often underdiagnosed and undertreated. The prevalence of mental health issues in the elderly is approximately 50% in the United States (M). The elderly population is the fastest growing segment of the U.S. population, and the number of people aged 65 and older is expected to increase from 40 million in 2010 to 80 million by 2050. Mental health issues in the elderly are often underdiagnosed and undertreated. The prevalence of mental health issues in the elderly is approximately 50% in the United States (A). The elderly population is the fastest growing segment of the U.S. population, and the number of people aged 65 and older is expected to increase from 40 million in 2010 to 80 million by 2050. Mental health issues in the elderly are often underdiagnosed and undertreated. The prevalence of mental health issues in the elderly is approximately 50% in the United States (1). The elderly population is the fastest growing segment of the U.S. population, and the number of people aged 65 and older is expected to increase from 40 million in 2010 to 80 million by 2050. Mental health issues in the elderly are often underdiagnosed and undertreated. The prevalence of mental health issues in the elderly is approximately 50% in the United States (A).
