

for her well-child check-up and immunizations. The family physician conducts a thorough physical examination, measures Emil's growth and development, and addresses any concerns raised by the parents.

Results and Discussion

The family physician discusses the recommended immunizations for Emil, including vaccines to protect against diseases such as diphtheria, tetanus, pertussis, polio, and pneumococcal infections. The physician educates the parents about the importance of immunizations in preventing serious illnesses and protecting Emil's health.

The family physician addresses the parents' questions and concerns regarding potential side effects and vaccine safety. The physician emphasizes evidence-based information and assures the parents that the vaccines are safe and effective.
