Introduction

Myanmar, as other low-and center pay nations, has experienced a lopsided decrease in future and personal satisfaction because of the health related crisis. These differences might be connected with the general deficiency of the country's crisis clinical framework, which faces many difficulties, most remarkably in giving quality crisis care. There is an undeniable deficiency of prepared medical care suppliers. In view of the consequences of this review, a huge extent of respondents detailed giving crisis care consistently regardless of having no conventional preparation. Concentrate on members were likewise in a difficult spot in procuring extra abilities and information in crisis medication, including absence of instructive open doors for occupants and restricted opportunity to get extra preparation close by their ongoing clinical obligations recognized a few significant boundaries to Respondents likewise felt there were lacking motivators for preparing in crisis medication and hardly any open positions in the field. As with other LMIC crisis care suppliers, a large portion of the members we talked with had no particular preparation in crisis care. These colleges do exclude crisis medication in their clinical school ed

ment of the crisis clinical framework in Myanmar is still in its beginning phases, many specialists perceive the significance of crisis medication in further developing the wellbeing framework across Myanmar. A staggering greater part (more than 80%) of medical services suppliers overviewed accepted that crisis care improvement ought to be a general wellbeing need. Myanmar is like numerous other LMICs in that crisis care isn't yet all around coordinated into the clinical and formal clinical schooling system. Notwithstanding, the review distinguishes a few practical roads for what's in store. To start with, the abilities and information on existing crisis clinical experts ought to be improved through very much organized motivator based preparing programs. Second, extra schooling and preparing open doors in crisis medication ought to be made through the current college framework, both undergrad and graduate clinical examinations. As of late, both the Service of Wellbeing and the confidential wellbeing area are attempting to foster crisis medication instruction at all levels. Most of respondents care for patients distinguished as having a health related crisis. By the by, most respondents announced almost no proper preparation in crisis and intense consideration. LMIC nations, Like Myanmar, they convey lopsidedly high dreariness and mortality because of street traffic. Mishaps and other intense diseases are probably going to be dependent upon and benefit from crisis mediation Expanded accessibility of experts prepared in crisis medication. Endeavors to prepare existing staff through designated open doors, better monetary motivations to hold suppliers, and further developed admittance intense consideration through improved prehospital care frameworks is a vital stage to further develop results.

educational plans or graduate clinical training. In spite of the fact that Myanmar's ongoing crisis system faces many difficulties, it is setting out on a novel time of change.
