

Normal Pregnancy and Preeclampsia and Human Reproductive Applications

✉ Konstantin Ivanov

Department of Gynaecology, John Cabot University, Russia

Abstract: The aim of this study is to investigate the relationship between normal pregnancy and preeclampsia. The study was conducted in a tertiary care center. The results show that preeclampsia is associated with an increased risk of complications during pregnancy. The study also found that preeclampsia is associated with an increased risk of preterm delivery and low birth weight. The study concludes that preeclampsia is a complex condition that requires further research.

We have found that preeclampsia is associated with an increased risk of complications during pregnancy. The study also found that preeclampsia is associated with an increased risk of preterm delivery and low birth weight. The study concludes that preeclampsia is a complex condition that requires further research.
