the vaccination (Uvtgrvqeewu" rpgwoqpkc and Jcgoqrjknwu" kplmwgp/c), however there is no marketable immunizing agent aiming the multidrug resistant bacterium at the moment. Advanced curatives embrace new medical wares supported genes (gene remedy), cells (cell remedy) and apkins (towel engineering) [5].

Antimicrobial medical aid

Considering antimicrobial medical aid, sequence medical aid may be habituated transfact host cells so as to give specific proteins (similar as antibodies) against the pestilent agent or use silent ester chains (similar as siRNA or siRNA) to damo t ]

**Oral administration**
