Abstract

Holistic view and protective medicine are a must in the discipline family practise. Cancer is one of the diseases having the possibility of being detected early in the preventive medicine in routine practises, especially in middle and advanced age group. The most important mission is the primary healthcare services, which is the first contact point, in the early detection of disease groups, especially of cancers. In our article, we aimed to determine the significance of primary care healthcare services in the early detection of cancer and to raise awareness.
