

Using the RAND-36 in Community-dwelling Older Adults Leads to an Underestimation of Health-related Quality of Life

Aarts S

Funding

is study was funded by RAAK (Regional Attention and Action for Knowledge circulation) scheme [PRO-3-37].

Ethical Approval

All procedures performed in studies involving human participants were in accordance with the ethical standards of the institutional and/or national research committee and with the 1964 Helsinki declaration and its later amendments or comparable ethical standards. Informed consent was obtained from all individual participants included in the study.

Acknowledgements

The authors would like to thank all researchers and participants of the RAAK (Regional Attention and Action for Knowledge circulation) scheme [PRO-3-37]. Also, they thank the linguists for their help and interpretation regarding the items.
