**Citation:**

joint and result in torment, expanding and delicacy. Therefore, tension or body weight can't be applied to the harmed joint and the singular requirements to remain off it for a minimum half a month [6].

**Grade 3 (Severe):** These delicate tissue wounds include full or complete tears, which require a fundamentally longer recuperation time. People frequently observe they can't utilize the joint or muscle region at all following the injury. Extreme delicate tissue wounds are portrayed by shakiness, bursting and a serious level of torment and expanding.
