

The Process of Cell Regeneration

Paraskev Katsakori*

Perspective

Cell regeneration is a complex biological process that involves the replacement of damaged or lost cells. This process is essential for maintaining the integrity and function of various tissues and organs. The process of cell regeneration is a highly regulated and coordinated process that involves the differentiation and proliferation of stem cells. The process of cell regeneration is a highly regulated and coordinated process that involves the differentiation and proliferation of stem cells. The process of cell regeneration is a highly regulated and coordinated process that involves the differentiation and proliferation of stem cells.
