Abstract

People all across the world are impacted by the sickness of cancer. Though the goal of cutting-edge cancer research is to combat the disease's global effects, some communities are not always taken into consideration.

Section 1: Introduction to Cancer Care for the Elderly

The purpose of this section is to provide an overview of the challenges and opportunities in providing cancer care for the elderly population. It discusses the unique needs of older patients, the impact of comorbidities, and the importance of a multidisciplinary approach to care.

Case X: A 75-year-old male with a history of prostate cancer and hypertension.

This case study illustrates the complexities of managing cancer in an elderly patient. The patient has a history of prostate cancer and hypertension. The discussion focuses on the challenges of balancing the benefits and risks of treatment, the role of patient preferences, and the importance of close communication between the patient, family, and healthcare team.
