

Brief Notes on Pure Congenital Melanoma

Dr. Najet Wanger*

Department of Surgical Oncology, Regional Hospital of Jendouba, Jendouba, Tunisia, Faculty of Medicine of Tunis, Tunis Elmanar University, Tunis, Tunisia

Abstract

had been developing for almost a month. Axillary dissection was used to remove the mass containing axillary ectopic breast tissue. A multifocal carcinoma was found on pathology, and metastases were found in two lymph nodes. After six rounds of chemotherapy, she had local radiation. She had hormonal therapy and herceptin therapy. No signs of local recurrence or distant metastases have been seen after a year followup.

Conclusion:
